

Firefighter Indoor Navigation: Development Plan

Team Members:

Nawar Mikha
Jordan Shimel
Thomas Anter
Zachary Freeman

Client:

Mostafa Daneshgar Rahbar

GTA:

Samira Taghavi

Overview

- Vital to know the location of firefighter(s) at all times
 - Currently, using GPS is unreliable
- With that location, still difficult to navigate to reach that point in an unknown building
- Project Focus
 - Use camera to create real time mapping and navigation for firefighters in an unknown building

Overview

Purpose

- More efficient firefighter navigation leads to improved outcomes and is potentially life saving technology
- Better team coordination and less wasted time
- Provides a better alternative to GPS
- Localization will help team coordinator

Scope

- Short-term
 - Digital mapping and path tracking of the camera in relation to the building layout
 - Point-to-point Wi-Fi connection between camera/UP board and the main console
 - GUI on main console displaying camera feed and digital mapping

Speed x7

ORB-SLAM2 Map Viewer

- ☐ Follow Camera
- ☒ Show Points
- ☒ Show Keyframes
- ☒ Show Graph
- ☐ Localisation Mode

Reset

RGB-D

Scope (Continued)

- Long-term
 - Synchronize data from multiple cameras
 - Augmented reality feature for the base unit and for the firefighters
 - Locate and map the heat sources
 - Upgradable, scalable, and modular for future teams will inherit the project

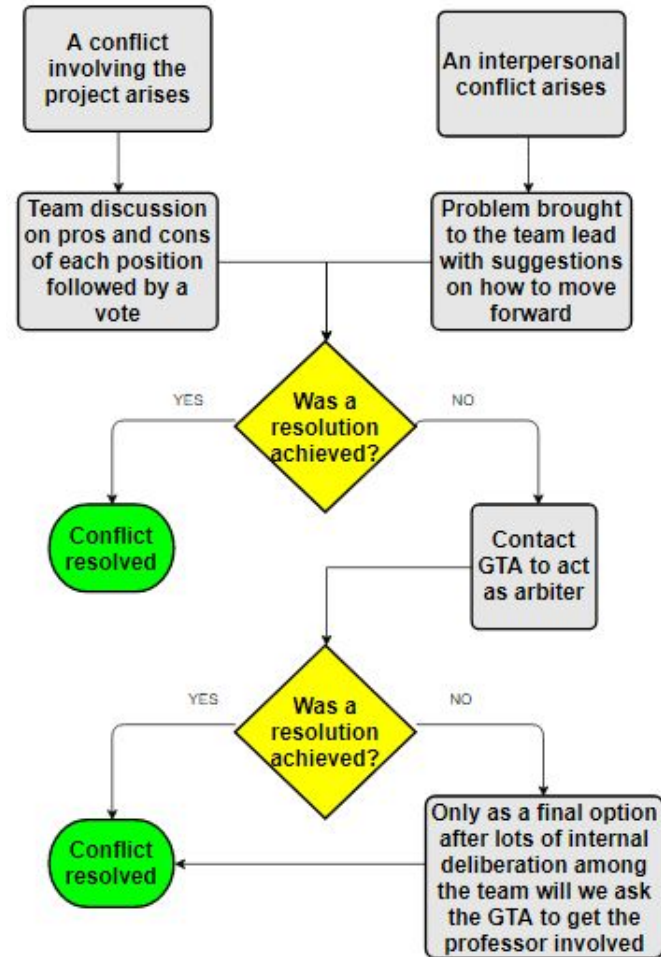

Objectives

- Deliver a fully functioning application that meets the requirements of our client by the end of the semester
- A camera and UP board that can transmit video as a ROS bag and software that can read the data and display it in various ways
- Smooth development process where problems are handled promptly to avoid lost time

Team Organization

- **Nawar Mikha**
 - Team Lead
 - Presentation Lead
- **Thomas Anter**
 - Documentation Lead
 - Backend Lead
- **Zachary Freeman**
 - UI Lead
 - Frontend Lead
- **Jordan Shimel**
 - Testing Lead
 - Integration Lead

Conflict Resolution Policies

Schedule

- Team meetings
 - With GTA: Thursdays 4:00 - 5:00 pm
 - With client: Thursdays 5:00 - 6:00 pm
 - Team members: Wednesdays 3:30 - 5:30 pm
 - Team members: Saturday/Sunday (provisional)

September	October	November	December
 Meeting Client / Gathering Requirements 9/9 - 9/12			
 Preliminary Research / Development Plan / Exploring Hardware 9/12 - 9/18			
 V1 - Capture Stereo Video with Camera and UP Board 9/18 - 9/24			
 V2 - Point to Point Wifi with UP Board and PC 9/24 - 10/1			
	 Successfully Install ROS 10/1 - 10/8		
	 Learn to Record Video as ROS Bag 10/8 - 10/15		
	 V3 - Send Stereo Stream 10/15 - 10/22		
	 Read ROS Bag as Video File on PC 10/22 - 10/29		
	 V4 - Create GUI 10/29 - 11/5		
		 Install OpenCV and ORB SLAM 11/5 - 11/12	
			V5 - Feed Video Stream to ORB SLAM to Display in GUI  11/12 - 12/10

Configuration Management Plan

- Weekly task assignments
 - Each lead will break down the tasks for his respective responsibility, then the team lead will assign each task based on the difficulty and time each task will take
 - Scrums on Wednesdays to evaluate sprints
 - Git branches will assigned to an individual for each feature, merges done during scrums on Wednesdays
